👤 CAREER OBJECTIVE

Results-driven AI & Machine Learning Developer specializing in computer vision, NLP, and intelligent agent architectures. Proven ability to build end-to-end ML pipelines, from deploying cloud-based RAG ecosystems to engineering real-time, quantized edge-computing systems. Actively seeking an internship opportunity to apply advanced AI problem-solving skills, contribute to production-grade architectures, and accelerate professional growth within a fast-paced tech environment.

🔧 MACHINE LEARNING & AI PROJECTS

- **Cross-Lingual RAG API for BD Districts** COMPLETED

github.com/Srestho0101/bd-guide-RAG-AI

 - Architected a production-grade RAG backend API using FastAPI and ChromaDB to query a dense SQLite database of Bengali upazila information, achieving a fast ~4.0s average response time.
 - Implemented cross-lingual semantic matching using Mistral embeddings, dynamically allowing English queries to accurately retrieve native Bengali text contexts.
 - Resolved complex cloud deployment bottlenecks on Render—including SQLite version constraints and local network routing—to ensure a stable, scalable REST API.
- **Autonomous Cloud Vision Desktop Agent** ACTIVE

github.com/Srestho0101/AI-computer-use

 - Engineered an autonomous multimodal AI desktop agent optimized for low-spec hardware (operating smoothly within 4GB RAM constraints) by offloading cognitive processing to the Mistral cloud API.
 - Developed a zero-disk perception pipeline using lossless RAM frame captures and kernel-level scancode injection for Wayland navigation, reducing execution loops to 1-3 seconds.
 - Implemented algorithmic API rate throttling and sandboxed Linux user execution to maintain system security and prevent free-tier limit exhaustion.
- **Real-Time Object Detection Drone** ACTIVE

github.com/Srestho0101/monster-vision

 - Designed an end-to-end edge-computing pipeline streaming live video to an Arch Linux server, achieving real-time inference using a dynamically quantized YOLOv8n model.
 - Fine-tuned the YOLO architecture on a custom dataset, significantly optimizing inference speed and targeted detection accuracy for dynamic drone environments.

⌘ TECHNICAL SKILLS

LANGUAGES & FRAMEWORKS

Python PyTorch

TensorFlow FastAPI

DATA SCIENCE & AI

ChromaDB Mistral AI

HuggingFace NumPy

Pandas

TOOLS & DEPLOYMENT

Git Docker Render

SQLite Arch Linux

🎓 EDUCATION

Machine Learning Foundations [Independent Study](#)

Rigorous independent study in Differential Calculus, Linear Algebra, and Statistics specifically tailored for AI applications.

Secondary School Certificate (SSC) [Completed 2026](#)

Recently completed formal secondary examinations, shifting immediate focus to applied computer science and software engineering.
